

Figure 1. Location Map for Long Bay, South Carolina (SC). Observations were obtained at eight sites (Inset B) offshore of Myrtle Beach, SC from October 2003 through April 2004. Site 8 is in the middle of a shore-oblique sand feature defined by the 10 meter bathymetry contour. This feature is approximately 10 kilometers in length, 2 kilometers in width, and is in excess of 3 meters thick.
